

ABSTRACT

[Problem to be solved] To provide an input device which can input a large number of information codes fast while being carried out by one hand.

[Means for solving the problem] An input device 10, which inputs information into an electronic apparatus, comprises a hold member 16 which is held by one hand; and input keys which are provided on that portion where the input keys are operable by the tip of a finger of the one hand holding the hold member 16, change into plural states when operated with the tip of the finger unreleased, and are for inputting information into the electronic apparatus which detects the plural states. The input keys are provided approximately perpendicular to an up and down direction of the hold member 1.
